EDUCATION

University of California, Berkeley

Berkeley, CA

Bachelor of Science in Computer Science and Electrical Engineering

Aug. 2024 – May. 2028

Coursework: Data Structures, Structure and Interpretation of Computer Programs, Computer Architecture, Foundations of Signals, Dynamical Systems and Information Processing,

EXPERIENCE

Software Engineering Intern

June 2025 – Aug. 2025

AsyncHealth

Berkeley, CA

- Built a JavaScript backend service using Node.js and Express to integrate Epic's EHR sandbox with the AsyncHealth web application through **FHIR R4 APIs** and OAuth 2.0 PKCE, **reducing** manual data entry by **90%**
- **Developed** an embedded e-signature proof of concept using Node.js, Express, and Axios to integrate the **SignWell API** into patient on-boarding.
- **Reached** out and **collaborated** with Darena Health's CEO to apply FHIR integration best practices and improve interoperability between AsyncHealth and external healthcare system ensuring **scalability**.

Software Engineering Intern

Jan. 2025 – June 2025

CloudIDR

Berkeley, CA

- Built an **Amazon EC2** cost-analysis application in Python that estimated potential annual savings of up to **40%** for enterprise customers.
- Extracted 400,000+ **cloud-computing** records using Google Cloud Platform (GCP) for CTGAN model training and **generated** synthetic customer workloads containing CPU and memory utilization data.
- Conducted **research** on synthetic data generation, **cloud workload** prediction, and generative model architectures to inform the team's approach to workload modeling.

Product Management Intern

March 2023– July 2024

Virtual Medical Missions

Eastvale, CA

- Co-developed and hosted a **PHP** eVisit application on **Microsoft Azure**, implementing patient registration, medical-history questionnaires, and a physician portal for remote patient viewing.
- **Collaborated** with clinicians and medical students to translate clinical evaluation workflows into rule-based branching logic for cough and shortness-of-breath assessments
- Shipped a **Raspberry Pi**-based vital-sign monitoring system incorporating SPO2, ECG/EKG, and temperature sensors, conducting A/B testing with medical reference equipment achieving a **5% margin of error**
- **Presented** to Former CNUUSD **Superintendent** Dr. Buenrostro along with CNUUSD Board Members

PROJECTS

Credit Batch Reconciler | Electron, Node.js, SQLite

July 2026

- **Shipped** an end-to-end product that turns Chevron/Texaco credit and EFT PDFs into a searchable ledger, live discrepancy dashboard, and configurable reconciliation history for operators managing multiple stores.
- Modeled financial data as isolated **SQLite** databases per store with schema migrations; preserving full history instead of session-scoped spreadsheets.
- **Automated** reconciliation of credit batches, helping identify over **\$40,000 in missing credits** that would have otherwise required extensive manual investigation **reducing 20+ hours** of manual work

Glean | Agentic AI

June 2026

- Developed a **full-stack** meal planning application with a **Next.js** frontend, **FastAPI** backend, and **PostgreSQL** database to recommend recipes based on pantry ingredients, dietary preferences, and macro-nutrient targets
- Integrating Groq-hosted language models and Google Gemini into a **multi-agent** AI pipeline that processes ingredient availability and nutritional goals to generate personalized recipe recommendations.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, C/C++, SQL, PHP, HTML/CSS

Frameworks: React, Node.js, Express.js, FastAPI, Electron

Developer Tools and Database: Git, Visual Studio Code, PyCharm, IntelliJ, PostgreSQL, SQLite

API and Cloud: Rest APIs, Schwab API, FHIR API, Microsoft Azure, Google Cloud Platform (GCP), Supabase

AI and ML: Multi-agent Systems, Google Gemini, Groq, Ollama, CTGAN
